## tag2

At this day i worked on a code for a server, that would handle a requests on site in futer.

I wrote a script, that will give you a page when you request it by clicking on a button in navigation bar. Also that script allows me to change a content of site without code, just by add some text files, wrtited in markdown markup.

Now I better understand how the servers and internet network in all works. Also, during this day i get acquainted with encoding. I lerned what is it and how it works on basic level.

## tag3

Today I worked mostly with Javascript, that is a programing language that allows make internet pages interactive.

Also I add a few fetures in my python server:

- 404 error handling (you could see it by add a few symbols in url)
- correct naming of sections in navigation bar
- images support

## tag4

At that day I worked on an algorithm that will allow me create folders in the folder when I saved files before.

Also I serched for more beautiful design. I haven't found one that I liked for now.

## tag5

At that day I worked on one math task that was given to me. In this task they ask you is number of route one polynom even based on which coefficient it have

I have done it.

## tag6

At first half of a day I finished with site's design. I have found it in internet and download. You can find source [here](#)

At second half of the day we bought a domain and a server, that would use to make my site acesssable in Internet. Also I started se it up, installed nginx and SSL certificate.

## tag7

We saw, that with previosly used technologie we can't set it up correctly, that means that we forced to change a technology. We chossed Flask.

This is a Python framwork, more details you can find [here](#)

So, that day I spend on lerning this technology and rewrite the site using it.

## tag8

At this day I seted up server for this site, and starting from this day is is acesssable in internet

Also I setted up a SSL certificate, now browser won't say, that connection is not secure.
